SIMPLEX TELEGRAPH

International Morse Code

1. The length of a dot is one unit.
2. A dash is three units.
3. The space between parts of the same letter is one unit.
4. The space between letters is three units.
5. The space between words is seven units.

0x68 stands for 'h'

Asynchronous Serial Communication

1 start bit (0), 8 data bits (lsb-first), 1 stop bit (1)

9600 baud = 9600 bits/sec

(1000000 usecs)/9600 ~ 104 usec/bit

<https://learn.sparkfun.com/tutorials/serial-communication>

sos.c -> serial.c

Logic Analyzer!

GPIO Alternate Functions

// hot wire TX

// device = tty (teletype) or cu

// baud rate = 9600

% screen /dev/cu.usbserial-0001 9600

CTRL-A K - to exit

```
% screen /dev/cu.usbserial-0001 115200
```

uart.h, uart.c

Universal Asynchronous Receiver-Transmitter

Power of Types and Pointers

```
struct gpio {  
    unsigned int fsel[6];  
    unsigned int reservedA;  
    unsigned int set[2];  
    unsigned int reservedB;  
    unsigned int clr[2];  
    unsigned int reservedC;  
    unsigned int lev[2];  
};
```

```
volatile struct gpio *gpio = (struct gpio *)0x20200000;  
gpio->fsel[0] = ...
```

GPIO ALT Function

Every GPIO pin can be input, output, or one of 6 special functions (ALT0-ALT5), specific to each pin.

PIN	ALT0	ALT1	ALT2	ALT3	ALT4	ALT5
GPIO14	TXD0	SD6				TXD1
GPIO15	RXD0	SD7				RXD1

// BCM2835-ARM-Peripherals.pdf

// Sec 2: Mini-UART, SPI0, SPI1, pp 8-19

```
struct UART {  
    unsigned data; // I/O Data  
    unsigned ier;  // Interrupt enable  
    unsigned iir;  // Interrupt identify/fifo  
    unsigned lcr;  // line control register  
    unsigned mcr;  // modem control register  
    unsigned lsr;  // line status  
    unsigned msr;  // modem status  
    unsigned scratch;  
    unsigned cntl; // control register  
    unsigned stat; // status register  
    unsigned baud; // baud rate register  
} ;
```

echo.c

loop back test

C Strings

"cs107e" =

\0
65
37
30
31
73
63

```
size_t strlen(const char *str)
{
    for (const char *s = str; *s; ++s)
        ;
    return (s - str);
}
```

```
// strlen("a")?
// strlen(NULL)?
// strlen('a')?
```

String Functions in string.h

<code>strcat(s1,s2)</code>	Concatenate s2 to s1
<code>strncat(s1,s2,n)</code>	Concatenate at most n characters of s2 to s1
<code>strcpy(s1,s2)</code>	Copy s2 to s1; Note the direction of the copy!
<code>strncpy(s1,s2,n)</code>	Copy first n characters of s2 to s1
<code>strlen(s)</code>	Return length of string s, not counting '\0'
<code>strcmp(s1,s2)</code>	Compare s1 with s2; Return integer less than zero, equal to zero, or greater than zero
<code>strncmp(s1,s2,n)</code>	Compare only the first n characters of s1 and s2
<code>strchr(s,c)</code>	Return a pointer to first occurrence of character c in string s; return NULL if not found
<code>strrchr(s,c)</code>	Return a pointer to last occurrence of character c in string s; return NULL if not found
<code>strstr(s1,s2)</code>	Return a pointer to the first occurrence of string s1 in string s2; return NULL if not found
<code>strstr(s1,s2)</code>	Return a pointer to the first occurrence of string s1 in string s2; return zero if not found

// Assignment 3

```
/*  
** printf(const char *format, ...);  
*/
```

```
printf("%d, %d\n", 1, 2);  
printf("%x\n", 0x20200008);  
printf("%c\n", 'a');  
printf("%s\n", "hello");
```

// Lots of practice with pointers!

```
// Note '\0' at the end!  
char arr[] =  
    ['c', 's', '1', '0', '7', 'e', '\0'];  
// short cut  
char arr[] = "cs107e";  
  
char ch = arr[1]; // ok? ch?  
  
char *ptr = "cs107e";  
ch = ptr[1];  
  
arr = ptr; // ok?  
ptr = arr; // ok?
```
